CON-Line®

The requirements for the design and planning of a wide variety of communication or presentation rooms are constantly growing, and the combination of media technology and design is becoming more and more important.

With the Con-Line series, Hagor Products GmbH offers a perfect solution for combining high-quality media furniture and professional AV technology.

Functional details such as a mounting plate for accommodating AV components inside the elegant copus, accessible via an easily removable front, as well as practical accessories for video conferencing cameras, for example, allow efficient and flexible working.

The Con-Line is available as a free standing or mobile solution and as well as for floor-wall mounting. It can be combined with a add-on table and offers single and dual screen solutions and, as a highlight, it is available with motorised height adjustment.

The design can also be adapted at any time according to the customer‘s wishes, so that the Con-Line can be optimally integrated into any type of room in a design-oriented and flexible manner.
