

## HP Counterbalanced Floor-Wall HD

### Stand system with manual height adjustment

Item no.: 8224

The HP Counterbalanced Floor-Wall HD is a stand system for floor-to-wall assembly with manual height adjustment. The stand system is suitable for screens and whiteboards with a size of 70 - 90 " | 178 - 229 cm screen diagonal.

The included VESA mount can be equipped up to a maximum of VESA 800 x 600 mm.

The height of the system is infinitely variable, thanks to a mechanism that can be adjusted to the weight of the device. The screen holds - without locking - safely at the desired height. The travel distance is 400 mm.

The load capacity can be adapted to the weight of the device and is between a minimum of 60 and a maximum of 90 kg.

The assembly is combined with a screw connection on the wall and on the floor.

The surfaces of the HP Counterbalanced Floor-Wall are finished with an impact- and scratch-resistant powder coating in black.

As an alternative the HP Counterbalanced Floor-Wall is available.
