

HA Flex-Lock Tabletstand

Fully moveable mount for tablets

Item no.: 8713

The HA Flex-Lock Tabletstand is a fully moveable tablet mount for table mounting.

It can be mounted using a drill hole through the table top (grommet) or screwed directly onto the table top.

When mounting by drilling through the table top, table top thicknesses of up to 50 mm can be taken into account.

Thanks to the flexibly adjustable frame elements, the mount can be adapted to different tablet sizes via tools.

By fixing the frame elements via tools, the tablet is secured and can no longer be detached from the mount, which creates an anti-theft effect.

The moveable mounting head makes it possible to switch between landscape and portrait format at any time. In addition, the mounting head can be tilted by $\pm 180^\circ$.

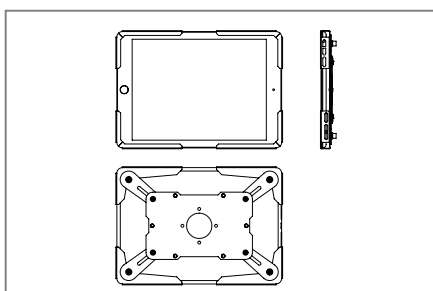

The surface of the HA Flex-Lock Tabletstand is finished with an impact- and scratch-resistant powder coating in black, which makes the surface very carefree.
