

TSG-tablet protective enclosures

Tablet protective enclosure for iOS, Windows and Android models

The TSG-tablet protective enclosure series is particularly characterized by the fact that it is made of high-quality, impact-resistant materials and has precisely fitting cutouts for the camera and touch surface.

The side key lock allows the tablet to be protected from unauthorized access. This expands the application possibilities enormously. Functions such as mobile data, WiFi, Bluetooth and cameras are almost completely retained.

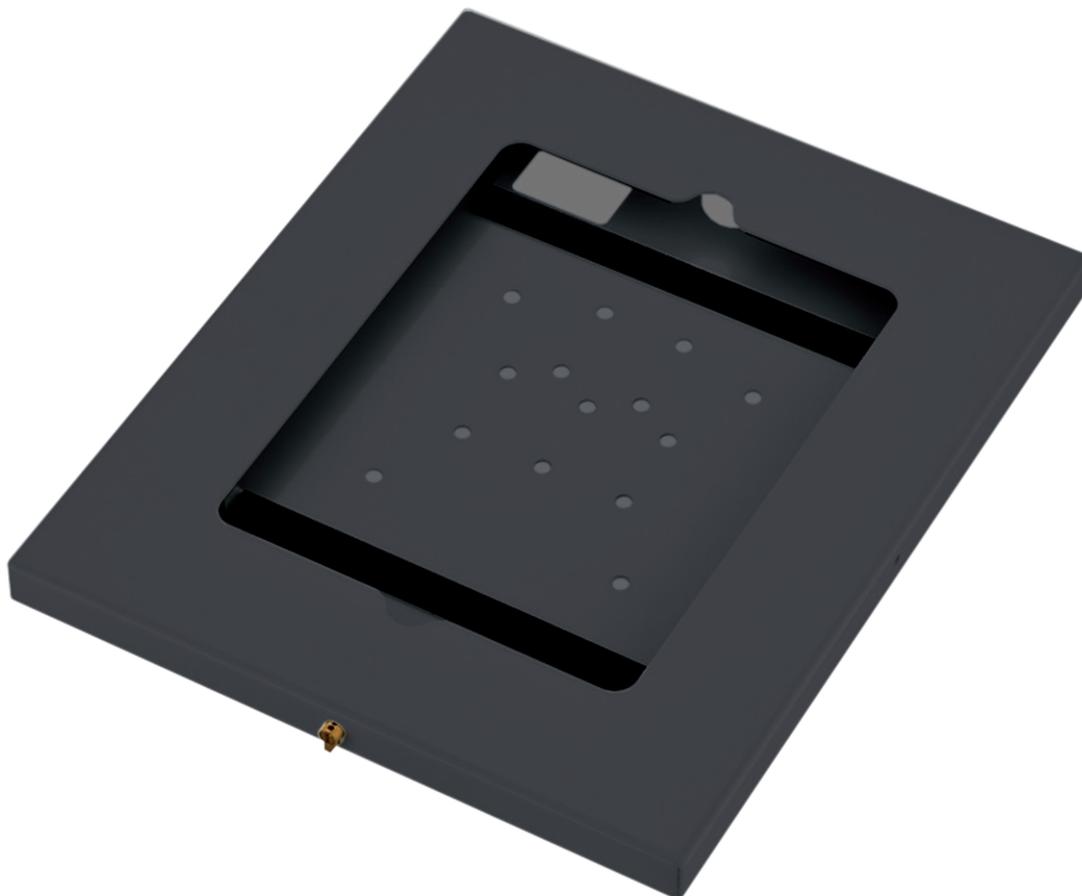

Protective supports are built into the inside of the folding and lockable enclosure, which prevents scratches and ensure that the tablet stays exactly in position. Charging of the tablet battery is protected, possible during operation.

The TSG tablet protection enclosure contains a VESA hole pattern on the back, which e.g. enables direct wall mounting - optionally in portrait or landscape format.

The standard colour of the enclosure is subtle black (RAL 9005) - other RAL colours on request.

Available in two sizes for almost all commercially available tablet models - please take a look at our model selection.

Optionally, the stable enclosure can also be combined with the TSG-Stand (Item no.: 2580), the HA Tablet Stand (Item no.: 8797) or the HA tablet wallmount (Item no.: 8798).

TSG-tablet protective enclosures

Tablet protective enclosure for iOS, Windows and Android models

- Anti-theft enclosure for almost all commercially available tablet types (iOS, Windows, Android)
- mountable in portrait or landscape format
