VWS Cube
modular video wall stand system

An insufficient wall quality on site, a trade fair participation or a freestanding installation in a room? Here's the solution: our modular video wall stand system VWS Cube. Just get the split wall you want - anytime, whenever, wherever!

The system is based on individual frame constructions, which can be installed next to or on top of each other as often as you want. Depending on the requirements, either as portrait or landscape installation.

Thanks to spring bolts with integrated twist-lock, there are no tools required for the installation. As this system allows to position several frame modules next to each other, the video wall can be infinitely extended in horizontal direction. A maximum of 7 rows of screens can be installed in vertical direction on top of each other.

The standard version of the base frame, which is used to fasten the screen, has a hanging system that can also be fine-tuned using rotary handles. The split wall can thus be conveniently aligned in height, depth and width and a gap-free matrix can be created.

The system can also be expanded with our VWH video wall mounts. Here, for example, there is the option of pulling out the screens using the „push-out function" if necessary. The base frames are also fixed using struts on the back.

If there is no space for a floor construction, the individual frames can also be attached to the wall using integrated angles. Uneven floors are also no problem. Thanks to the height-adjustable feet, you can react quickly and easily.

Whether the execution of the video wall should start directly at floor level or with a fixed starting point can be optionally varied at any time. The space created below the video wall can be left open or covered with a frame. Our VWS-Cube, in the standard color black, can also be customized in other RAL colours on request.

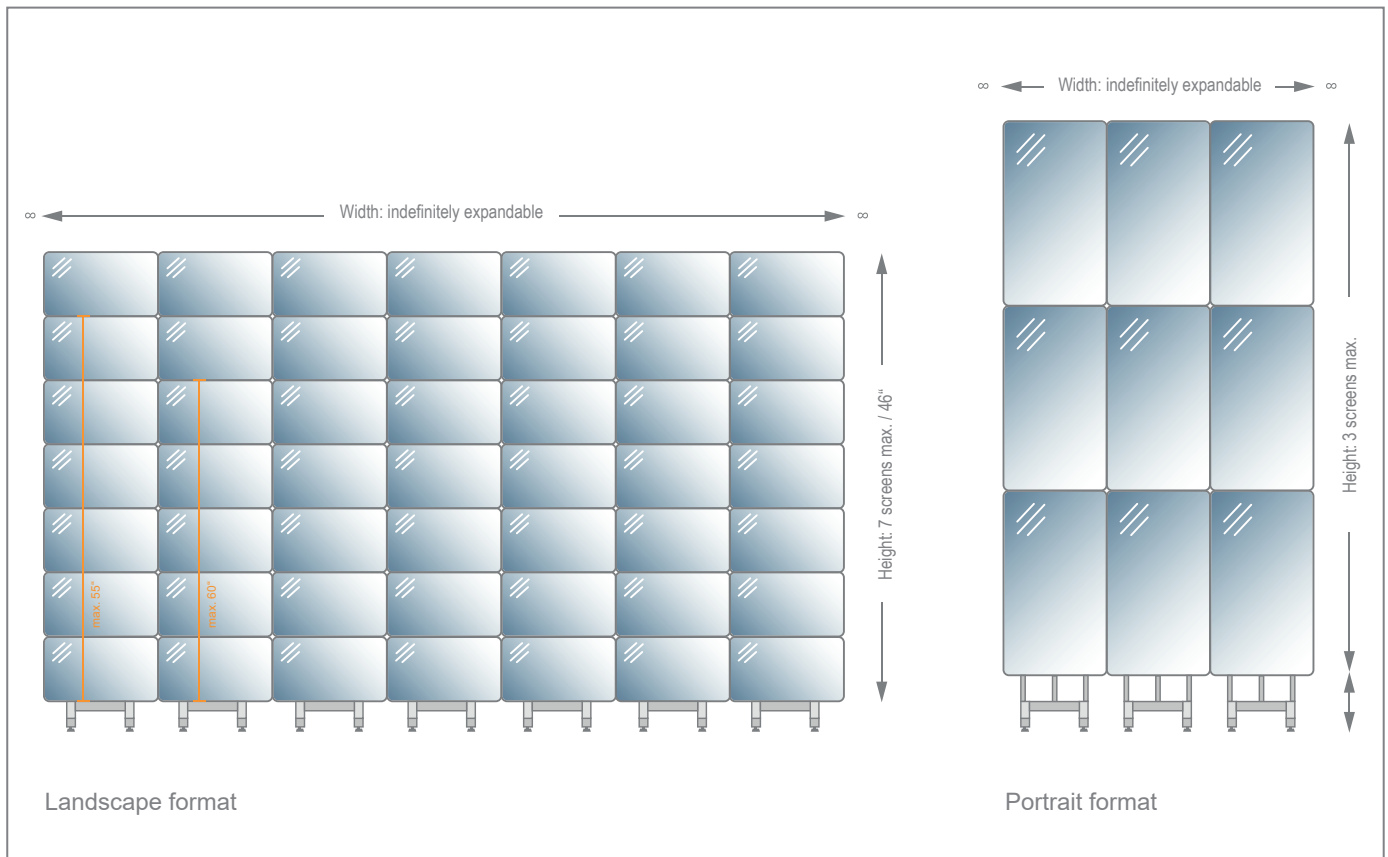

Example configuration 3x3
